Mustang SUD awarded for budget presentation

District honored for sixth consecutive year

AUBREY, TEXAS – For the sixth year in a row, the Mustang Special Utility District (SUD) received the Government Finance Officers Association (GFOA) Distinguished Budget Presentation Award, this time in recognition of its 2016 budget document.

This award program encourages and recognizes state and local governments that prepare budget documents of the highest quality, reflecting the guidelines established by the National Advisory Council on State and Local Budgeting and the GFOA's best practices on budgeting.

"We are honored to have achieved national recognition for an outstanding budget for six years consecutively," said Chris Boyd, general manager of Mustang SUD. "We strive to apply the best budgeting practices available, as part of being fiscally responsible and striving for excellence in community stewardship. I am proud of our finance department for successfully achieving this high honor once again."

According to the GFOA, Mustang's budget presentation rated "proficient" in all four evaluation categories designed to assess how well an entity's budget serves as a policy document, a financial plan, an operations guide and a communications device, and also earned a "proficient" rating in the 14 mandatory criteria within those categories.

About the Mustang Special Utility District

The Mustang Special Utility District (SUD), based in Aubrey, Texas, has been committed to providing a safe, quality water supply and wastewater services to northeast Denton County for over 50 years. Initially established in 1966 as the Mustang Water Supply Corporation to serve a mostly rural area with just 50 connections, it later converted to an SUD as it evolved and grew with the region, thus becoming a Texas political subdivision. Today, the District serves more than 12,500 connections and roughly 30,000 customers in the surrounding communities and is recognized by the Texas Commission on Environmental Quality as a Superior Public Water System. The District's current system consists of 10 groundwater wells, 2.8 million gallons per day of surface water capacity and three wastewater plants.
